Report Overview

A Fixed Focus Camera Objective refers to a type of camera lens that has a predetermined focal length and cannot be adjusted or zoomed. This means that the camera's field of view and magnification are fixed, and the user cannot change them. The primary advantage of a fixed focus camera objective is its simplicity and cost-effectiveness, as it eliminates the need for complex mechanical components found in variable focus lenses. These lenses are often used in applications where a specific field of view is required, such as surveillance cameras or in machine vision systems where precise object detection is necessary. Fixed focus lenses are also known for their consistent image quality and reliability, as there are fewer moving parts that can wear out or malfunction over time.
