Report Overview

A Fixed Thruster is a propulsion system used in various marine vessels, such as ships, boats, and submarines. It consists of a motor-driven propeller that provides thrust for maneuvering and positioning the vessel. Unlike traditional propellers, fixed thrusters are mounted in a fixed position, typically on the bow or stern of the vessel. They can be directional or omnidirectional, allowing the vessel to navigate in different directions. Fixed thrusters are commonly used in dynamic positioning systems, which help maintain the vessel's position and orientation, making them essential for offshore operations, precision docking, and ship handling in challenging marine environments.
