### Report Overview

A rivet is a metal pin with a "shaped head" on one end and a "shop head" on the opposite end. Strong shank rivets and unique rivets are the two styles of rivets used in aircraft. Aerospace rivets are used to secure fittings to various parts of aircraft and to join aircraft skin sections and spar sections. In addition, aerospace rivets are used to join a large number of bracing members and other components. The rivets form a tight bond that is equal to the strength of the material being connected. As opposed to general-purpose rivets, aerospace rivets are made to higher requirements and specifications. 100 degree countersunk, and brazier heave are a few popular aerospace rivet varieties.
