### Report Overview

Flat Plate Collectors (FPCs) are a type of solar thermal technology designed to harness solar energy and convert it into heat. These collectors consist of a flat, usually rectangular, absorber plate that is painted black or coated with a selective surface to absorb solar radiation efficiently. The plate is typically enclosed by a glass or plastic cover that allows sunlight to pass through while minimizing heat loss. FPCs are often used in solar water heating systems, where the absorbed heat is transferred to a fluid, such as water or a heat transfer medium, which is then circulated to provide heat for various applications, including domestic hot water, space heating, and industrial processes. The simplicity of their design, ease of installation, and relatively low cost make them a popular choice for residential and small-scale commercial applications.
