Report Overview

Flavomycin Premix is a veterinary pharmaceutical product designed to treat and prevent various bacterial infections in livestock, particularly poultry. It is a premixed formulation containing the active ingredient Flavomycin, which is a polyether ionophore antibiotic derived from the *Streptomyces* species. This product works by disrupting the bacterial cell membrane's selective permeability, leading to an imbalance in essential ions and ultimately causing cell death. Flavomycin Premix is typically administered in feed to ensure uniform distribution and effective treatment of infections such as coccidiosis, necrotic enteritis, and other gram-positive bacterial diseases. It is crucial to follow the recommended dosage and withdrawal periods to ensure the safety and efficacy of the product, as well as to minimize the risk of antibiotic resistance development.
