Abstracts

Fleet vehicle upfitting services are a professional and targeted field. In order to meet the needs of efficient transportation, logistics fleets may optimize the vehicle's engine to improve fuel efficiency; or modify the carriage to increase cargo capacity or improve the way the cargo is fixed. Firefighting fleets, ambulance fleets, engineering fleets, etc., the vehicles of these fleets need to be modified according to special work tasks. For example, fire trucks need to be equipped with powerful firefighting equipment and high-pressure water pumps; ambulances need to be equipped with advanced medical emergency equipment and comfortable stretcher systems; engineering vehicles may need to be equipped with various engineering tools. Brand modification shops have cooperative relationships with automobile brand manufacturers, and can obtain technical support and genuine accessories. They mainly serve high-end brand fleets and customers with high quality and after-sales requirements; independent modification factories are more flexible and can provide diversified modification solutions. They are highly competitive in the mid- and low-end markets and personalized modification fields. Technology and service quality are the key to competition: technical level is the core competitiveness, and modification shops need professional technicians who can design personalized modification solutions according to vehicle conditions and customer needs; service quality is also very important, including pre-modification consultation, communication and progress feedback during modification, and after-sales service after modification, which affects customer satisfaction and loyalty. With the development of intelligent automobile technology, vehicle modification will incorporate intelligent elements, such as modifying electronic control systems, installing intelligent driving assistance systems, and realizing remote vehicle monitoring and data analysis. The popularization of new energy vehicles has made new energy vehicle modification services a new growth point, such as upgrading battery systems, optimizing motors, and performing aerodynamic and lightweight modifications to improve mileage and

performance.
