Report Overview

A flexible fiber optic laryngoscope is a medical device used to examine the mouth and larynx. It consists of flexible fiber optics and a small camera located at the end of the laryngoscope. Through optical fiber transmission, the camera can transmit images to a connected display screen for the doctor to observe. The characteristic of this laryngoscope is its softness and flexibility, which allows it to adapt to the shape of the oral cavity and larynx of different patients and reduce the patient's discomfort. Compared with traditional rigid laryngoscopes, flexible fiber optic laryngoscopes are gentler to use, reducing irritation and damage to the patient's oral and laryngeal tissues. Flexible fiber optic laryngoscopes are usually used in medical settings, such as stomatology, otolaryngology, etc., to examine diseases in the mouth, larynx, trachea and other parts of the body.
