Abstracts

Flexible sheet-to-sheet vertical continuous electroplating equipment is a high-efficiency electroplating equipment for flexible circuit board manufacturing. Its working principle is to sandwich the flexible plate between two conductive fixtures, and then pass through the vertical plating tank to achieve uniform plating on the surface of the flexible plate and the wall of the hole. This equipment has the following features: Space-saving: Due to the vertical plating tank, the equipment occupies a small area, which is suitable for the layout of the factory. Energy saving: due to the plate-to-plate electroplating method, the current density of the equipment is high, and the electroplating time is short, which can reduce energy consumption and cost. Improve quality: Due to the use of conductive fixtures and vertical electroplating tanks, the equipment can ensure the flatness and stability of flexible plates, avoid deformation and bubbles, and improve the quality and consistency of electroplating layers.

The global Flexible Sheet To Sheet Vertical Continuous Electroplating Equipment market size was estimated at USD 285.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
