Report Overview

Float-type liquid drainers are specialized devices designed to automatically remove condensate and other liquids from compressed air systems, steam lines, or industrial piping while preventing gas or air loss. These drainers operate using a float mechanism that opens and closes a valve based on the liquid level, ensuring efficient drainage without energy waste. They are widely used in industries such as manufacturing, HVAC, oil and gas, and power generation, where maintaining system efficiency and preventing corrosion or contamination from accumulated condensate is critical.
