Report Overview

An float zone polished wafer is a type of silicon wafer that has been processed using the Float Zone (FZ) method, which involves melting a silicon rod and then slowly pulling it out of the molten material. This process results in a high-purity silicon crystal that is free of impurities and defects. Float zone polished wafers are used in the production of integrated circuits and other electronic components. The high-purity silicon crystal ensures that the electronic components are reliable and perform at their best. The smooth and flat surface of the wafer allows for precise patterning of the electronic components using photolithography techniques.
