Abstracts

The floating photovoltaic support system is a system that installs photovoltaic modules on the water. The floating photovoltaic support system can make full use of water resources, such as lakes, reservoirs, ponds, etc., to increase the installed photovoltaic power generation capacity. Especially when geographical resources are limited, the scale of photovoltaic power generation can be effectively expanded. Since floating photovoltaic modules are on the water, they can benefit from the heat dissipation effect of the water, reduce module temperature, and improve battery conversion efficiency. At the same time, water bodies can also reflect sunlight, increase the absorption of light energy by photovoltaic modules, and further improve power generation efficiency.

The global Floating Photovoltaic Mounting System market size was estimated at USD 749.63 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 21.45% during the forecast period.
