Report Overview

A liquid flow rate totaliser is used to count the total amount of flowing substances (such as fluids). For example, when we go to a gas station to refuel, the "totaliser" will become the key to payment. When we pick up the fuel gun and pull the switch upwards, the fuel gauge will reset to zero; After refueling, we hang up the refueling gun and pull the switch back. The fuel gauge will display how many gallons of gasoline we have added, and we will charge based on this number of gallons. How many gallons of fuel is called an totaliser.
