Report Overview

A Fluorescence Laparoscopy System is a state-of-the-art medical imaging device designed to enhance the visualization of internal body structures during minimally invasive surgical procedures. This system integrates advanced fluorescence imaging technology with traditional laparoscopy, allowing surgeons to detect and differentiate tissues based on their natural fluorescence or through the use of exogenous contrast agents. The system typically comprises a high-resolution camera, specialized light sources, and software that processes the fluorescence signals to produce clear, real-time images. These images can highlight blood vessels, lymphatic structures, or tumor margins, providing surgeons with critical information to make precise incisions and reduce the risk of complications. The Fluorescence Laparoscopy System is particularly valuable in oncological, gastrointestinal, and urological surgeries, where the ability to identify and preserve healthy tissues while removing diseased areas is crucial.
