Abstracts

Fluoride toothpaste refers to toothpaste that contains fluoride. Fluoride is effective in preventing tooth decay. There was a view that fluoride toothpaste should not be used before the age of 2 to avoid poisoning if swallowed. However, in 2014, the American Dental Association and the American Academy of Pediatrics revised this view: babies can use fluoride toothpaste starting from the first tooth. Children over 3 years old can start using ordinary children's toothpaste with a fluoride content of 0.05% to 0.11%; for children under 3 years old, the fluoride content needs to be controlled below 0.05%.
