Abstracts

Fluorosilicone Coated PET Release Liners are specialized materials used in the production and handling of adhesives and other sticky substances. These liners consist of a base layer made from polyethylene terephthalate (PET), a durable and flexible plastic, which is coated with a thin layer of fluorosilicone. The fluorosilicone coating provides excellent release properties, allowing adhesives to easily separate from the liner without leaving residue or causing damage. This makes them ideal for use in applications requiring clean and efficient adhesive release, such as in the manufacturing of labels, tapes, and other adhesive-backed products. The combination of PET and fluorosilicone offers both mechanical stability and high resistance to chemicals and temperature variations, ensuring reliable performance in various industrial settings.

The global Fluorosilicone Coated Pet Release Liners market size was estimated at USD 327.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
