Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on FMCW Millimeter-wave Radar competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. FMCW millimeter-wave radar is a high-precision sensing technology that operates in the millimeter-wave frequency range (typically 24 GHz, 77 GHz or 60 GHz) and uses continuous frequency modulation to detect and measure the distance, velocity, and angle of objects. By continuously transmitting a frequency-modulated signal and analyzing the frequency difference between the transmitted and received signals, FMCW millimeter-wave radar can accurately calculate the range and relative speed of targets with fine resolution and low latency. This technology is widely used in automotive advanced driver-assistance systems (ADAS), industrial automation, and security applications due to its excellent range accuracy, ability to penetrate adverse weather conditions, and robustness against interference. The surge in penetration of higher-level intelligent driving is the key driver of the market. As intelligent driving technology evolves from L2 to L2+, more OEMs are integrating features such as NOA (Navigate on Autopilot), automatic lane changing, and intelligent parking into mainstream models. These advanced functions demand greater accuracy and stability in environmental perception. Millimeter-wave radar, as a key component for long-range speed measurement and obstacle detection, has become a core standard feature. Especially in L2+ systems, typically one long-range front radar and 2 to 4 corner radars are installed?significantly more than the 1 to 2 radars commonly found in L1 configurations. Therefore, the widespread adoption of higher-level driving functions directly drives up the average number of millimeter-wave radars per vehicle and overall system demand.

The global FMCW Millimeter-wave Radar market size was estimated at USD 4026.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.30% during the forecast period.
