Report Overview

A Focal Plane Array (FPA) is a sophisticated sensor device used in imaging systems to detect and measure electromagnetic radiation, including visible light, infrared, and other wavelengths. Composed of a grid of individual detector elements or pixels, the FPA is positioned at the focal plane of an optical system, such as a camera or telescope. Each pixel in the array captures incoming radiation and converts it into an electrical signal, which is then processed to form a detailed image. FPAs are crucial in a variety of applications, including thermal imaging, astronomy, medical imaging, and remote sensing, offering high resolution, sensitivity, and accuracy. Their ability to detect and quantify radiation with precision makes them essential for advanced imaging technologies.
