Report Overview

Food grade lysozyme is a natural antimicrobial enzyme derived from sources such as egg whites, used primarily as a preservative in dairy, meat, seafood, and wine industries to extend shelf life by inhibiting bacterial growth. The market is driven by increasing demand for clean-label and natural preservatives as consumers shift away from synthetic additives. The dairy sector, particularly cheese production, represents a significant application due to lysozyme's effectiveness against spoilage-causing bacteria like *Clostridium tyrobutyricum*. Growth is further supported by rising food safety regulations and the expansion of processed food industries in emerging economies. However, challenges include high production costs, limited availability of raw materials, and competition from alternative preservatives. Key players are focusing on innovation, such as recombinant lysozyme production, to improve cost efficiency and scalability. The Asia-Pacific region is expected to witness the fastest growth due to increasing processed food consumption and stringent food safety standards in countries like China and Japan.
