Abstracts

A Foot-launched powered harness glider, also called foot-launched powered hang glider, is a hang glider with a motor and propeller in pusher configuration. An ordinary hang glider is used for its wing and control frame, and the pilot can foot-launch from a hill or from flat ground, needing an area of about the size of a football field to get airborne, or much less area if there is an oncoming breeze and an absence of obstacles. Although the main appeal of FLP HGs is to the already experienced hang glider pilot, interest in these machines is growing rapidly, particularly in areas where there are no hills for foot-launching.

The global Foot Launched Powered Harness Gliders market size was estimated at USD 32.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
