### Report Overview

Foreline Traps is a product that refers to a specific type of fishing trap or net designed to catch fish in bodies of water such as rivers, lakes, or oceans. These traps are strategically positioned along the foreline, which is the boundary or edge of a body of water where the water meets the land. The design of Foreline Traps is intended to maximize the efficiency of catching fish by taking advantage of the natural movement and behavior of fish near the water's edge. They are typically constructed using materials like nets, hoops, and floats to create a funnel-like structure that guides fish into a confined area where they can be easily harvested. The product may also include additional features such as escape gaps for smaller fish to maintain a sustainable fish population and ensure compliance with fishing regulations. Foreline Traps are an essential tool for commercial and recreational fishermen alike, offering a practical and effective method for catching fish in a variety of aquatic environments.
