Abstracts

Forest fire prevention video surveillance is a comprehensive system based on electronic technology, video monitoring technology and artificial intelligence technology, which aims to monitor forest fires in real time, find fire sources in time, and quickly alarm and process them, so as to effectively prevent and reduce the occurrence and losses of forest fires. The system collects video images through front-end monitoring points, transmits video signals to the monitoring center through the transmission network, and then the monitoring center performs remote control and video viewing, uses intelligent algorithms to analyze video images, determines whether there is a fire, and automatically alarms when a fire is found, triggering relevant processing procedures.
