### Report Overview

The four-chamber polyp trap is a specialized medical device designed to collect and preserve polyp specimens during endoscopic procedures, particularly colonoscopies. It features a segmented container with four separate chambers, allowing for the organized collection of multiple polyps in a single use while maintaining specimen integrity for pathological analysis. The device is typically made of medical-grade materials to ensure sterility and compatibility with endoscopic tools, often incorporating a filter mechanism to prevent specimen loss during fluid transfer. Its design addresses the clinical need for efficient polyp retrieval and labeling, which is critical for accurate diagnosis, staging, and treatment planning in gastrointestinal care. The product falls under the broader category of endoscopic accessories and is differentiated from simpler single-chamber traps by its ability to streamline workflow in high-volume endoscopic settings.
