Report Overview

A Free-Fall Metal Detection System is a specialized safety device designed to detect metallic contaminants in free-falling products during the manufacturing process. This system is crucial in industries such as food, pharmaceuticals, and cosmetics, where the presence of metal fragments can pose serious health risks and lead to product recalls. The system typically consists of a metal detector sensor mounted above a chute or conveyor belt, which allows products to pass through freely. As products fall through the detection zone, the system uses advanced electromagnetic technology to scan for any metallic objects. If a metal contaminant is detected, the system triggers an alarm and can be integrated with a reject mechanism to remove the contaminated product from the production line, ensuring the safety and quality of the final product.
