### Report Overview

A free forging press is a mechanical device used for the free forging of metal materials. It is driven by an electric motor, hydraulic system, or pneumatic system, transmitting power to the forging dies to apply high pressure on the metal material, causing it to undergo plastic deformation at high temperatures and pressures, forming the desired shape and size. Compared to hydraulic presses, free forging presses typically have higher forging forces and working speeds, making them suitable for the forging needs of large and heavy metal workpieces.
