Report Overview

Freeze-dried PCR Bead is a type of molecular biology reagent designed for use in polymerase chain reaction (PCR) experiments. It is a small, bead-like particle that contains all the necessary components for PCR amplification, including a thermostable DNA polymerase, buffer, and other essential enzymes and salts. The bead is freeze-dried to preserve the stability and activity of the enzymes and other components, allowing for long-term storage and easy transportation. When ready for use, the bead is simply resuspended in a small volume of water or sample, providing a convenient and efficient way to perform PCR reactions. This product is particularly useful for researchers and laboratories seeking a quick, reliable, and cost-effective method for DNA amplification, as it eliminates the need for separately purchasing and mixing multiple reagents.

In 2024, the global Freeze-dried PCR Bead market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
