Report Overview

Freeze-dried placenta powder is a dietary supplement derived from the human placenta, which is processed using freeze-drying technology. This method involves rapidly freezing the placenta and then reducing the surrounding pressure to allow the frozen water to sublime directly from the solid to the gas phase, resulting in a concentrated, dehydrated powder. The product is often encapsulated for easy consumption and is believed by some to contain nutrients and hormones that may provide various health benefits, such as boosting energy, supporting hormonal balance, and aiding in postpartum recovery. However, it is important to note that the scientific evidence supporting these claims is limited, and the use of placenta powder remains a controversial topic with varying opinions among medical professionals and consumers.
