### Report Overview

A French Drain System is a type of subsurface drainage system designed to effectively manage and divert excess water away from specific areas, such as foundations, slopes, or wetlands. It typically consists of a trench filled with gravel or other permeable materials, covered by a perforated pipe that allows water to enter the system. The water then flows through the pipe and is directed to a safe discharge point, such as a storm drain or a dry well, preventing water buildup and reducing the risk of water damage.
