Report Overview

Freshwater Cultured Pearl refers to a type of pearl that is cultivated in freshwater environments, primarily in lakes, rivers, and ponds. These pearls are produced by a variety of freshwater mussels, with the most common species being the *Hyriopsis cumingii* and the *Trianglesia* spp. The process of cultivating freshwater pearls involves implanting a small nucleus, typically made from mussel shell or other materials, into the mollusk's mantle tissue. Over time, the mollusk secretes nacre around the nucleus, gradually forming the pearl. Freshwater cultured pearls are valued for their affordability, diverse shapes, and range of colors, which include white, pink, purple, and gold. They are commonly used in jewelry making and are an alternative to more expensive saltwater cultured pearls, such as Akoya and South Sea pearls.
