Abstracts

Frozen vegan burgers are pre-cooked or uncooked plant-based patties that are typically made from ingredients like vegetables, legumes, grains, and plant-based proteins. These burgers are designed to mimic the taste, texture, and appearance of traditional meat-based burgers but without using any animal products. They are sold frozen, making them convenient and long-lasting, ready to be cooked or reheated whenever desired. A primary driver of the frozen vegan burger market is the rising consumer demand for plant-based food products. As more people become aware of the health, ethical, and environmental benefits of plant-based eating, they are opting for vegan alternatives to traditional meat products. Veganism and vegetarianism are no longer niche movements but have become mainstream lifestyle choices. This shift is not only driven by ethical considerations, such as animal welfare, but also by the growing body of research linking plant-based diets to a reduced risk of chronic diseases, such as heart disease, obesity, and type 2 diabetes.

The global Frozen Vegan Burger market size was estimated at USD 1585.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
