Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Full Body Dryer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Full Body Dryer is a device that quickly dries clothes or hair on the whole body of a person by forced circulation of hot or cold air. It is often used in humid environments, after exercise, medical care or industrial scenarios to improve drying efficiency, reduce discomfort or meet specific hygiene needs. Its design usually covers the whole body and achieves uniform drying through air jets, air duct guidance or wrapped structures. With the improvement of living standards, consumers are paying more attention to personal hygiene and the pursuit of convenient life. Full - body dryers provide a quick and hygienic way to dry, which can meet the needs of consumers in this regard, especially in residential, healthcare, and fitness sectors. As people's disposable incomes increase, they have more financial ability to purchase products that improve comfort and convenience, such as full - body dryers. This is particularly evident in developed countries where economic stability allows for greater discretionary spending. The global aging population is increasing. The elderly often have reduced mobility and more sensitive skin, and full - body dryers offer them a comfortable, safe, and hygienic drying option, which helps to prevent skin abrasions caused by traditional towels and reduce physical exertion. The increase in healthcare expenditure reflects the emphasis on improving health and hygiene standards. Full - body dryers can help reduce the risk of skin infections and irritation associated with moisture, which is especially attractive in healthcare settings.

The global Full Body Dryer market size was estimated at USD 791.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the
