### Report Overview

A Fully Automatic Rifle is a type of firearm designed to fire continuously with a single pull of the trigger, as opposed to semi-automatic rifles which require the trigger to be pulled for each shot. This product is characterized by its rapid rate of fire, which can be crucial in various combat situations. It is typically equipped with a selector switch that allows the user to choose between semi-automatic and fully automatic firing modes. The design of a fully automatic rifle often includes features such as a robust build to withstand the recoil and heat generated by sustained firing, a reliable feeding mechanism to ensure continuous ammunition supply, and sometimes a cooling system to manage overheating. These rifles are commonly used by military and law enforcement personnel due to their ability to provide suppressive fire and engage multiple targets quickly. However, their use is often regulated due to the potential for misuse and the need to maintain public safety.
