### Report Overview

A fully-automatic shotcrete machine is a sophisticated construction equipment designed to apply concrete at high velocity onto surfaces, typically used for tunneling, mining, and other civil engineering projects. This machine operates on an automated system that mixes, conveys, and propels concrete through a hose to the nozzle, where it is then projected onto the target surface. The fully-automatic aspect refers to the machine's ability to perform these functions without continuous manual intervention, ensuring a consistent and efficient application of concrete. Key features of a fully-automatic shotcrete machine include a robust mixing system to ensure uniformity of the concrete mixture, a powerful propulsion system to handle the high pressures required for shotcreting, and advanced control systems that allow for precise placement and thickness control of the concrete layer. These machines are valued for their ability to improve safety by reducing the need for manual labor in hazardous areas, and for their efficiency in achieving a quick and even application of concrete, which can lead to significant time and cost savings in construction projects.
