Report Overview

Fumigation chemicals are a class of compounds specifically designed and formulated for the purpose of pest control and eradication through the process of fumigation. These chemicals are typically volatile and can penetrate various materials, including soil, wood, and fabrics, to reach and kill pests such as insects, rodents, and microorganisms. They are used in a variety of settings, including agriculture, food storage, and structural pest control, to protect crops, stored products, and buildings from infestations. The effectiveness of fumigation chemicals lies in their ability to create a gaseous environment that is toxic to pests, while being safe for humans and the environment when used according to proper guidelines and regulations.
