## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Functional Prebiotics competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Functional prebiotics are special dietary components that cannot be digested or absorbed by the human body but selectively stimulate the growth and metabolism of beneficial gut microbiota, commonly applied in food and health products. In 2024 the production was 14,000 tons and the average price was 10,000 USD/ton. The functional prebiotics industry chain upstream includes raw material suppliers of starch, inulin, and whey, represented by Cargill, Ingredion, and FrieslandCampina; the midstream consists of prebiotics production and formulation processing; downstream applications are mainly in food and beverages as well as infant nutrition, represented by Nestlé, Danone, and Abbott. In 2024, the annual capacity per production line was approximately 500 tons, with an average gross margin of 55%. The market outlook for functional prebiotics is highly promising, driven by the increasing global emphasis on gut health and overall immunity. Future growth will benefit from the upgrading of health-oriented consumption, the rising popularity of functional foods, and the development of personalized nutrition. Applications will expand significantly in infant nutrition, functional beverages, and dietary supplements. Meanwhile, scientific advancements are accelerating the development of novel prebiotics with stronger targeting and synergistic effects, further enhancing product value. Overall, the functional prebiotics industry is expected to maintain rapid growth and play a crucial role in the food and health sectors.
