Report Overview

The G10.5 and G11 LCD Panel refers to large-scale liquid crystal display (LCD) panels produced by manufacturers, typically using the 10.5th generation (G10.5) and 11th generation (G11) production lines. These panels are characterized by their large screen sizes, which can range from 65 inches to 110 inches or more. The G10.5 and G11 panels are manufactured using advanced semiconductor and display technologies, allowing for high-resolution images, vibrant colors, and improved contrast ratios. They are widely used in various applications such as televisions, computer monitors, and large public displays. The use of these generational lines signifies the scale of the glass substrates used in the manufacturing process, with G10.5 and G11 lines enabling the production of larger and more efficient panels compared to smaller generation lines. This technology is crucial for meeting the growing demand for larger display screens in the consumer electronics and commercial display markets.
