Abstracts

A vertical-cavity surface-emitting laser (VCSEL) is a semiconductor-based laser diode that emits a highly efficient optical beam vertically from its top surface. VCSELs differ from other common semiconductor optical sources such as Edge Emitting Lasers (EEL) that emit light from the side. VCSEL has the characteristics of single longitudinal mode, circular output spot, low price and easy integration, but the luminous transmission distance is short, suitable for short distance transmission within 500m. The main application scenarios are: internal data center, consumer electronics. This report studies GaAs-based VCSEL in Optical Communication market.

The global GaAs-based VCSEL in Optical Communication market size was estimated at USD 278.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.00% during the forecast period.
