Report Overview

Gardenia Yellow Pigment (GYP) is a type of synthetic organic pigment that is widely used in various industries due to its vibrant yellow hue and excellent color properties. It is derived from the azo class of pigments, characterized by the presence of one or more azo groups (-N=N-) in their molecular structure. GYP is known for its high tinctorial strength, which means it requires a small amount to achieve a strong color, and its excellent lightfastness, making it resistant to fading under exposure to light. This pigment is also noted for its good heat stability and resistance to migration, which are crucial properties for applications in printing inks, coatings, and plastics. GYP's chemical composition and manufacturing process result in a product that offers a consistent and reliable color performance across different substrates and under various environmental conditions.
