Report Overview

A Garlic Split Machine is a piece of equipment designed to split garlic bulbs into individual cloves efficiently. It's commonly used in commercial settings where garlic is processed on a large scale, such as food processing facilities or farms. The machine typically works by feeding whole garlic bulbs into a hopper or conveyor belt system. As the bulbs move through the machine, various mechanisms are employed to gently split the bulbs, separating the cloves. These mechanisms might include blades, rollers, or pneumatic systems designed to exert controlled pressure on the garlic bulbs to break them apart. Garlic Split Machines can significantly speed up the process of preparing garlic cloves for further processing or packaging, compared to manual methods. They help improve efficiency, reduce labor costs, and ensure consistency in garlic processing operations.
