Report Overview

A Gastric Balloon Retrieval Device is a specialized medical instrument designed to safely and effectively remove gastric balloons from the stomach after their intended use. Gastric balloons are non-surgical weight loss tools that are temporarily placed in the stomach to help patients feel fuller and eat less. The retrieval device is typically a long, flexible tube equipped with a mechanism to grip and extract the deflated or collapsed balloon. This device is crucial for ensuring patient safety and comfort during the removal process, as it allows for a controlled and precise extraction, minimizing the risk of complications such as injury to the esophagus or stomach lining. The design of the retrieval device may vary depending on the specific type of gastric balloon used, but its primary function remains the same: to facilitate a safe and efficient removal of the balloon once it has served its purpose.
