Report Overview

The gastrointestinal endoscopic surgery training robot is a specialized medical simulation device designed to provide hands-on, realistic training for surgeons in minimally invasive endoscopic procedures. These robotic systems typically incorporate high-fidelity anatomical models, haptic feedback, and virtual reality (VR) or augmented reality (AR) interfaces to replicate real surgical conditions, enabling trainees to practice techniques such as polypectomy, biopsy, and mucosal resection without risk to patients. Advanced models may integrate AI-driven performance analytics to assess precision, speed, and decision-making, offering personalized feedback to improve skill acquisition. The technology addresses the growing demand for standardized, competency-based training in endoscopy, particularly as minimally invasive techniques become the gold standard for gastrointestinal diagnostics and treatments. By bridging the gap between theoretical knowledge and clinical practice, these robots enhance procedural safety and reduce the learning curve for surgeons, making them a critical tool in modern medical education and hospital training programs.
