Gear design and analysis software is a computer program that is used to design and analyze gears. It helps engineers and designers in the process of creating gears by providing tools and features to model, simulate, and optimize gear systems. Some common features of gear design and analysis software include:

1. Gear modeling: The software allows users to create 2D or 3D models of gears, including various types such as spur gears, helical gears, bevel gears, and worm gears. Users can define parameters such as gear dimensions, tooth profiles, and material properties.
2. Gear calculation: The software performs various calculations related to gear design, such as gear ratio, pitch diameter, tooth contact analysis, and backlash. It helps users determine the optimal gear parameters for a specific application.
3. Simulation and analysis: Gear design software can simulate the behavior of gears under different operating conditions, such as load, speed, and temperature. It can analyze factors like stress distribution, contact patterns, and efficiency to ensure the gear system meets the desired performance requirements.
4. Optimization: The software often includes optimization algorithms that can automatically adjust gear parameters to achieve specific goals, such as minimizing noise, maximizing efficiency, or reducing wear. It helps designers find the best gear configuration for their application.
5. Manufacturing support: Some gear design software provides features to generate manufacturing drawings, including gear profiles, dimensions, and tolerances. It can also generate CNC machine code for gear production.
6. Integration with CAD software: Gear design software often integrates with computer-aided design (CAD) software, allowing users to import and export gear models seamlessly. This integration enables designers to incorporate gears into larger assemblies and perform system-level analysis.

The global Gear Design and Analysis Software market size was estimated at USD 1225.0 million in 2025 and is projected to grow at a compound annual growth rate
