GPRS chips use general packet radio service (GPRS), a standard for wireless communications with a throughput rate of 115 kilobits (kbps) per second. GPRS represents an enhancement to global system for mobile communications (GSM), a standard which marked the advent of the 'smart-card' technology in wireless products. GPRS chips are popular choice with device manufacturers for a wide range of consumer and enterprise applications. Unlike GSM, which restricts message lengths to 160 bytes, GPRS permits a continuous flow of IP packets. This means that a wireless chip can be used in a range of devices. For example, wireless GPRS phones can be used for everything from global position and other location-based services to multimedia streaming such as video and text-messaging). Companies that use GPRS chips in their wireless communication products can also provide Internet access and intranet access.

The global General Packet Radio Service Gprs Chips market size was estimated at USD 1250.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of -3.75% during the forecast period.
