Report Overview

A Geosynchronous Equatorial Orbit (GEO) satellite is a satellite in geosynchronous orbit, with an orbital period the same as the Earth's rotation period. Such a satellite returns to the same position in the sky after each sidereal day, and over the course of a day traces out a path in the sky that is typically some form of analemma. A special case of geosynchronous satellite is the geostationary satellite, which has a geostationary orbit? a circular geosynchronous orbit directly above the Earth's equator.
