## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Giant All-Steel Radial Tires competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of giant all-steel radial tires will reach 303,600 units, with an average selling price of US\$21,785 per unit. Tires can be categorized by size into standard-sized and jumbo tires. Within the tire industry, products with an inner diameter of 49 inches or less are generally referred to as engineering radial tires, while those 49 inches or larger are referred to as jumbo tires. Jumbo tires have complex application scenarios and place high demands on material properties, tire profile, and tire size during production. Jumbo tires are all larger than 49 inches, with the largest size reaching 63 inches. This makes production challenging and presents high barriers to entry in terms of technology, capital, and customer acquisition. Technically, the 63-inch off-road tire, as the largest size available, represents a company's technological prowess in the off-road sector. As a niche segment of the tire industry, all-steel jumbo tires are characterized by high technical barriers and strong customer loyalty. Currently, the market is dominated by international tire giants such as France's Michelin, Japan's Bridgestone, and the United States' Goodyear. The three major international brands maintain a global market share exceeding 85%. Giant all-steel radial OTR tires are a distinctive, high-end product among OTR tires. Their enormous size and mass (maximum tire outer diameter exceeds 4 meters, maximum mass approaches 6 tons), harsh operating conditions, and long, uninterrupted operating hours make production of these giant all-steel tires technically challenging, and currently only a few tire manufacturers are capable of large-scale mass production. As a consumable component for daily heavy-duty dump trucks, the booming market for giant OTR radial tires is closely tied to two factors. First, rising global mining investment, the continuous

emergence of demand for new minerals, and the increasing use of heavy machinery are driving continued growth in the giant OTR tire market. Second, with the rapid development of domestic mining machinery manufacturers and their increasing market share, the proportion of mining truck OEMs choosing domestic giant tires as original equipment tires is also increasing.

The global Giant All-Steel Radial Tires market size was estimated at USD 6616.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
