Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 1-Butene-ethylene Copolymers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. 1-Butene-ethylene copolymers are a class of olefin copolymers produced by the polymerization of 1-butene and ethylene monomers. These copolymers typically belong to the family of linear low-density polyethylenes (LLDPE) or poly(?-olefin) copolymers, depending on the molecular structure and composition. The incorporation of 1-butene as a comonomer into the polyethylene backbone reduces crystallinity and density while enhancing properties like flexibility, clarity, and impact resistance. They are often synthesized using Ziegler-Natta or metallocene catalysts, allowing control over molecular weight distribution, short-chain branching, and mechanical performance. The ratio of 1-butene to ethylene directly influences the polymer's physical characteristics such as melting point, tensile strength, and elongation at break. The key market drivers for 1-butene-ethylene copolymers include the growing demand for flexible and durable packaging materials, particularly in the food, consumer goods, and industrial sectors. These copolymers offer superior puncture resistance, clarity, and processability, making them ideal for films, bags, and wraps. The expansion of e-commerce and logistics industries has further increased the need for strong yet lightweight packaging solutions. Additionally, the shift toward sustainable materials and downgauging (reducing material thickness while maintaining performance) is promoting the use of advanced metallocene-catalyzed copolymers. Rapid industrialization in emerging economies and continuous innovations in polymer production technologies also contribute to market growth.

The global 1-Butene-ethylene Copolymers market size was estimated at USD 12938.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
