1-ethyl-2-pyrrolidone (NEP) is a polar aprotic solvent belonging to the N-alkyl pyrrolidone family, characterized by its high boiling point, excellent solvency for a wide range of polymers and resins, low volatility, and strong thermal and chemical stability. It is structurally similar to N-methyl-2-pyrrolidone (NMP) but with an ethyl group substitution, which slightly alters its physical properties, such as a lower freezing point and slightly different solvation parameters. NEP is commonly utilized in industrial applications including as a solvent in the production of lithium-ion battery electrodes, agrochemical formulations, pharmaceuticals, coatings, and electronics manufacturing, where its ability to dissolve polar and non-polar compounds makes it versatile. However, its use is increasingly regulated due to reproductive toxicity concerns, prompting substitution efforts in some regions while demand persists in sectors where alternatives are less effective.

The global 1 Ethyl 2 Pyrrolidone market size was estimated at USD 280.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
