Abstracts

Surface Mount Device (SMD) thick film resistors are electronic components used in circuitry to control the flow of electric current. These resistors are made using a thick film deposition process, where a resistive paste is printed onto a ceramic substrate and then baked to form the resistive element. SMD thick film resistors are designed for surface mounting onto printed circuit boards (PCBs), offering advantages like space efficiency, ease of automated assembly, and good stability under various operating conditions. They come in various sizes and power ratings, catering to different application needs. The "thick film" aspect refers to the thicker layer of resistive material compared to thin film resistors, providing different electrical and thermal properties. Compared with other types of tolerance SMD thick film resistors, more than 70% of downstream products use 5% and 1% tolerance SMD thick film resistors.

The global 1% and 5% Tolerance SMD Thick Film Resistors market size was estimated at USD 1266.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
