Report Overview

Enriched boric acid (10B) is a specialized form of boric acid where the boron-10 isotope is enriched to higher concentrations than its natural abundance (approximately 20% in enriched form compared to ~20% natural occurrence). This product is primarily used in nuclear applications, particularly as a neutron absorber in control rods, shielding materials, and radiation detection systems due to boron-10's high neutron capture cross-section. It also finds niche applications in semiconductor manufacturing, medical therapies (e.g., boron neutron capture therapy for cancer), and advanced material sciences. The market is driven by demand from the nuclear energy sector, advancements in medical treatments, and increasing R&D in high-tech industries, though it remains a highly specialized and regulated segment due to its dual-use potential in nuclear and defense applications.

This report provides a deep insight into the global 10B Enriched Boric Acid market covering all its essential aspects.
