Report Overview

10B enriched boron carbide is a specialized ceramic material primarily used in nuclear applications due to its exceptional neutron absorption properties. It consists of boron carbide (B₄C) isotopically enriched with boron-10 (10B), which has a high thermal neutron capture cross-section, making it ideal for radiation shielding, control rods, and other nuclear reactor components. The material is valued for its high hardness, thermal stability, and resistance to chemical corrosion, extending its utility beyond nuclear sectors into armor plating and abrasive applications. The market for 10B enriched boron carbide is driven by increasing demand in nuclear energy, defense, and aerospace industries, though its high production cost and limited suppliers create niche dynamics with stringent regulatory and quality control requirements. Growth is further influenced by advancements in nuclear technology and rising investments in radiation shielding solutions.
