Report Overview

1,2-Dichloroethane (DCE), also known as ethylene dichloride (EDC), is a colorless, volatile liquid with a chloroform-like odor, primarily used as an intermediate in the production of vinyl chloride monomer (VCM), which is further polymerized to manufacture polyvinyl chloride (PVC). It is also utilized as a solvent in various industrial applications, including adhesives, pharmaceuticals, and textile processing, as well as in the synthesis of other chemicals like ethyleneamines and perchloroethylene. The market for 1,2-dichloroethane is heavily driven by the PVC industry, which accounts for the majority of global demand, while regional variations in environmental regulations and shifts toward alternative solvents influence its consumption patterns. Growth is closely tied to construction and automotive sectors, where PVC is widely used, though increasing environmental concerns and regulatory restrictions on chlorinated solvents may pose challenges. Asia-Pacific dominates production and consumption due to rapid industrialization, particularly in China and India, while North America and Europe see more moderate demand with a focus on sustainable alternatives. Price volatility of feedstocks like ethylene and chlorine also impacts market dynamics.

The global 1,2 Dichloroethane market size was estimated at USD 10011.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
